

State Injury Profile for Wyoming

About the State Injury Profiles...

Following this introduction you will find the injury profile for your state and the nation. The maps and tables contain information on injury deaths and death rates; however, it is important to remember that hundreds of thousands of Americans are nonfatally injured each year, many of whom suffer permanent disabilities. Your state injury profile includes:

- The 10 leading causes of death by age group for your state and the nation. These charts contain the total number of deaths for the three-year period 1995 through 1997. The summary table at the bottom of each page shows the total number of injuries across all ages for the same three-year period and the average number of deaths per year.
- The tables on the next page show the number of deaths for your state and the nation for the leading causes of injury death (separated by the type of injury—unintentional, suicide, and homicide) for the same three-year period.
- The next pages contain U.S. maps indicating the death rate per 100,000 persons for all states over a three-year period (1995-1997) for the leading causes of injury death. Beneath each map is a graph showing the death rate over a 10-year period (1988-1997). These maps and graphs will allow you to compare death rates for your state to other states and understand the 10-year trend in your state compared to the U.S. trend.
- The last two maps in the Profile give death-rate data and 10-year trends for two of the most frequent and disabling types of injury-related deaths: traumatic brain injury-related deaths, which can be caused by falls, firearms, motor-vehicle crashes, or other causes; and firearm-related deaths, unintentional or the result of homicide or suicide.

This State Injury Profile 2000 is presented as an appendix to the Centers for Disease Control and Prevention (CDC) Injury Fact Book, *Working to Prevent and Control Injury in the United States*. The Fact Book contains information regarding the cost of injury and the value of prevention, the work of CDC's National Center for Injury Prevention and Control, and the Safe USA Partnership Council. The Fact Book also contains fact sheets for many of the leading causes of injury death. Additional information can also be obtained from—

The graph displays the rate of cocaine use per 100,000 people in the United States and Wyoming from 1988 to 1997. The United States rate (blue line) is relatively stable, ranging from 1.5 to 2.0. The Wyoming rate (red line) is highly volatile, with a major peak of nearly 4.0 in 1995 and a low of 0.0 in 1992.

Year	United States	Wyoming
1988	1.95	1.70
1989	1.85	1.10
1990	1.80	2.10
1991	1.75	1.20
1992	1.60	0.00
1993	1.65	1.80
1994	1.50	0.95
1995	1.65	3.95
1996	1.50	1.75
1997	1.50	1.85

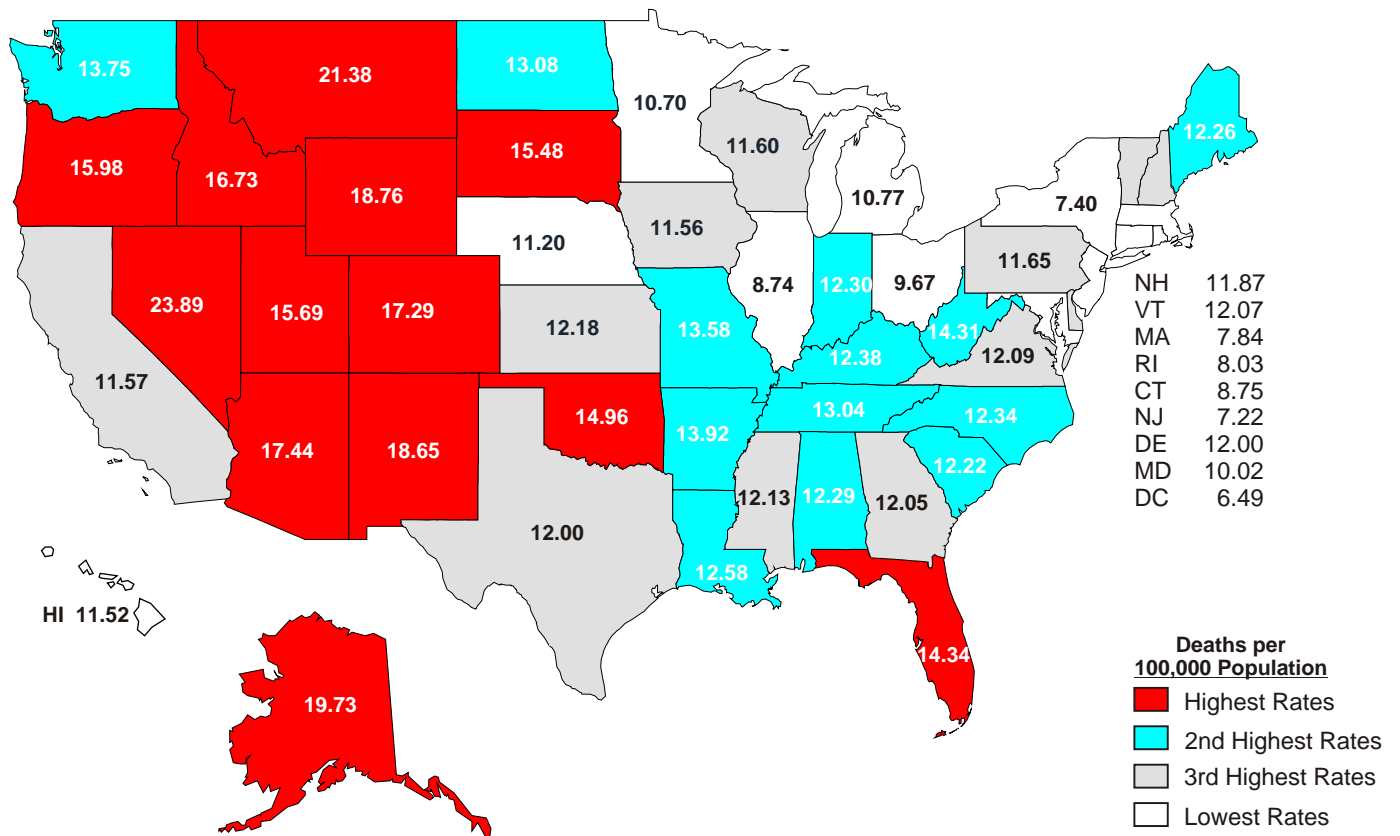

Unintentional Fire and Burn-Related Death Rates United States, 1995-1997

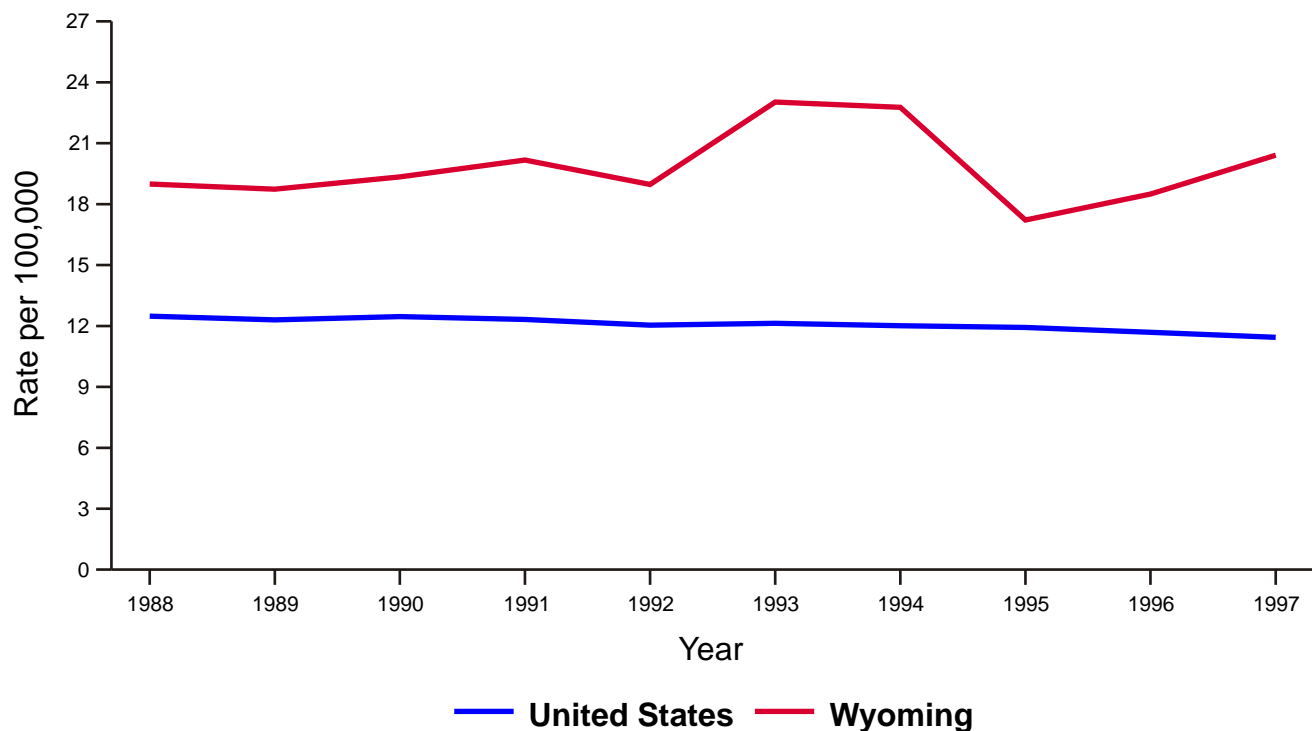

United States and Wyoming 1988-1997

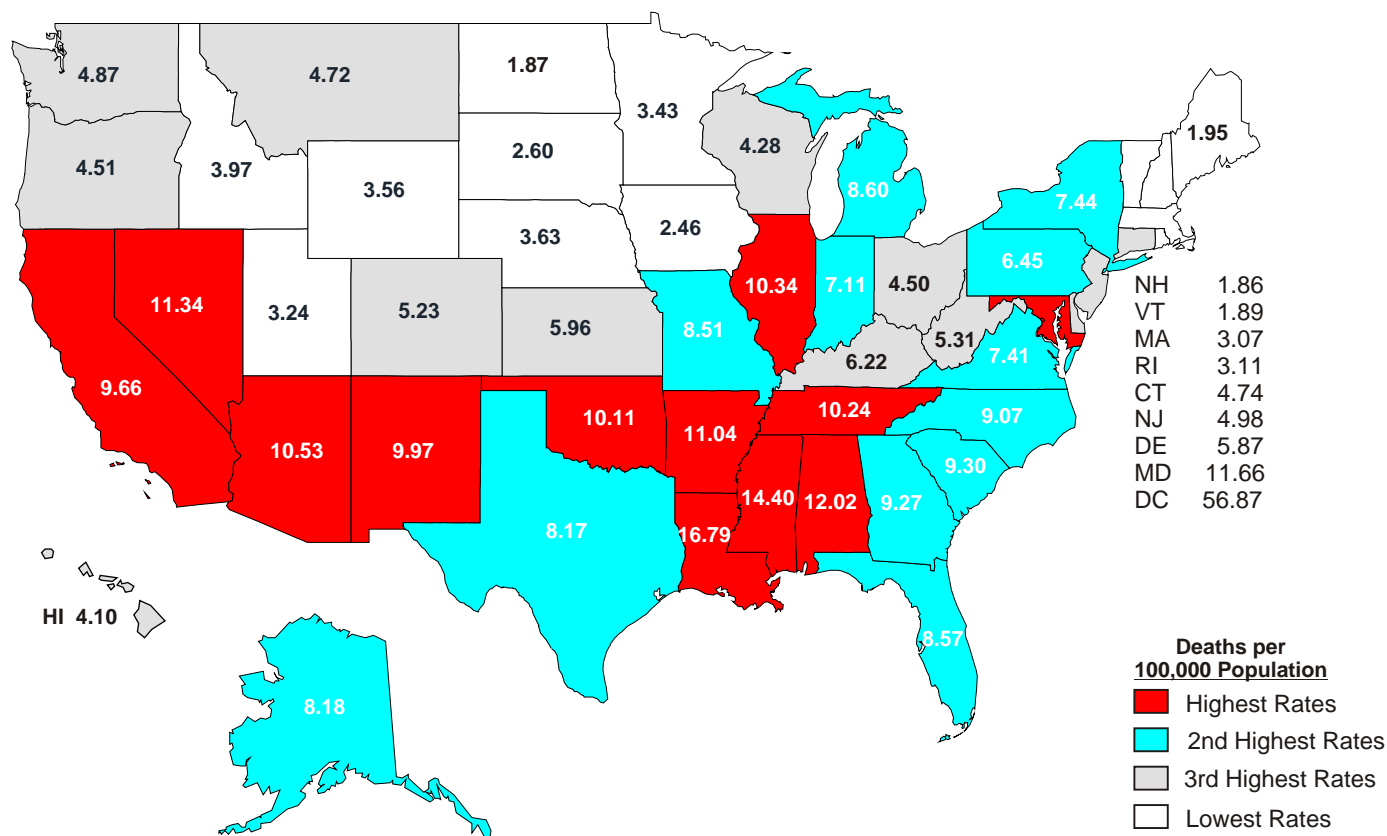

Suicide Death Rates United States, 1995-1997

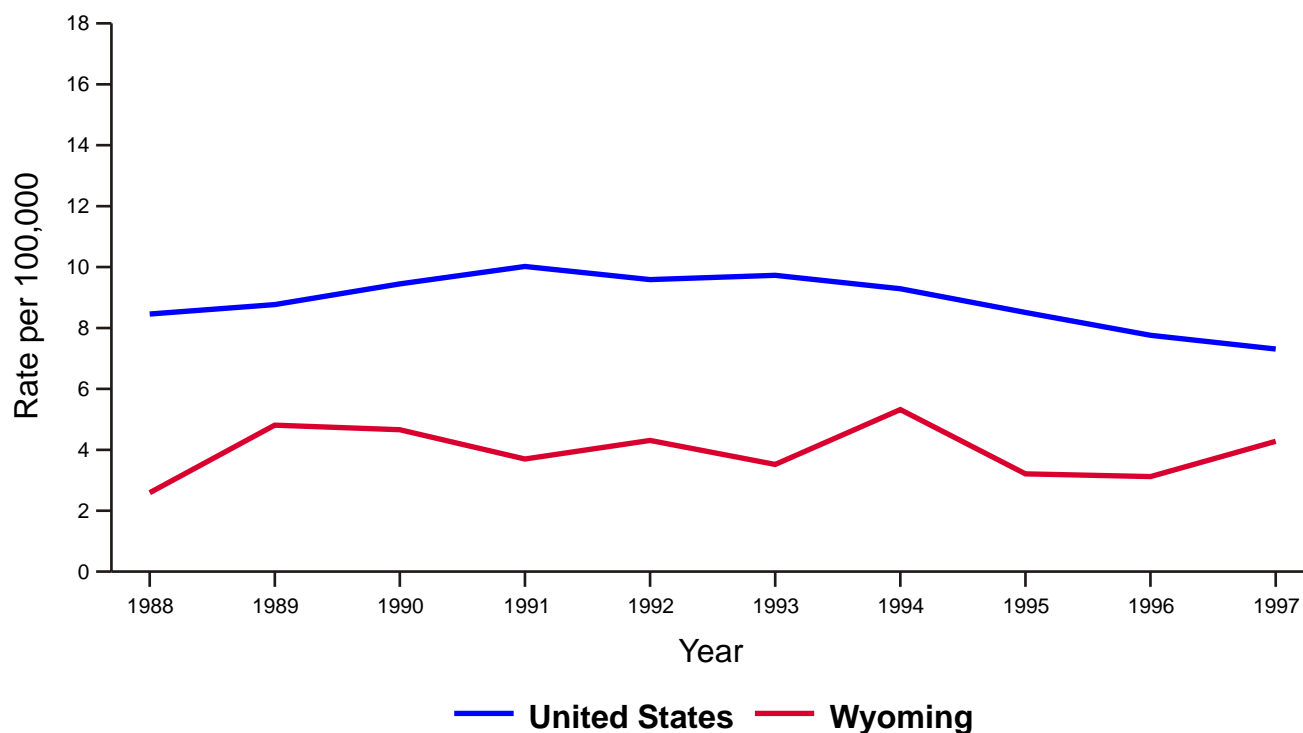

United States and Wyoming 1988-1997

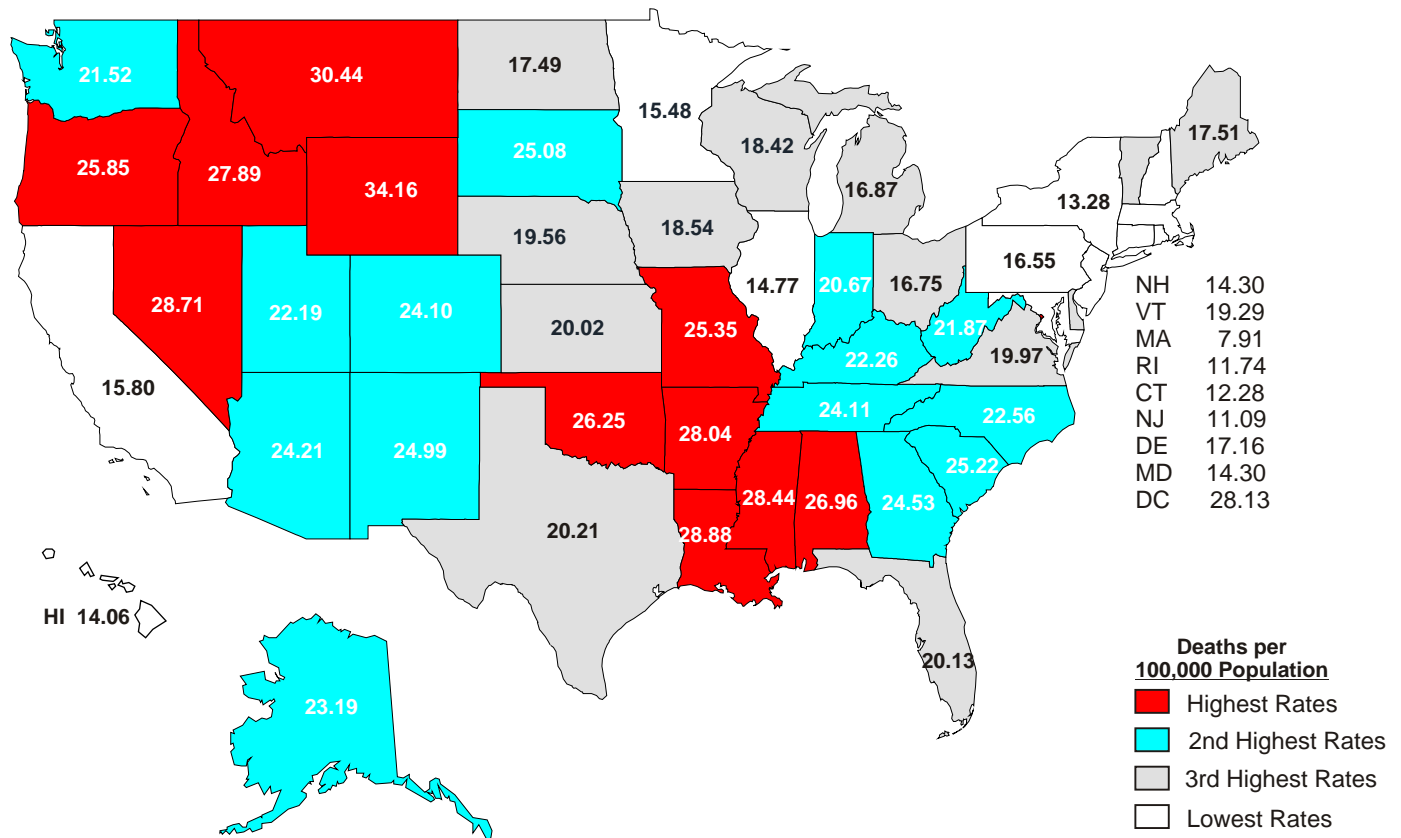

Homicide Death Rates United States, 1995-1997

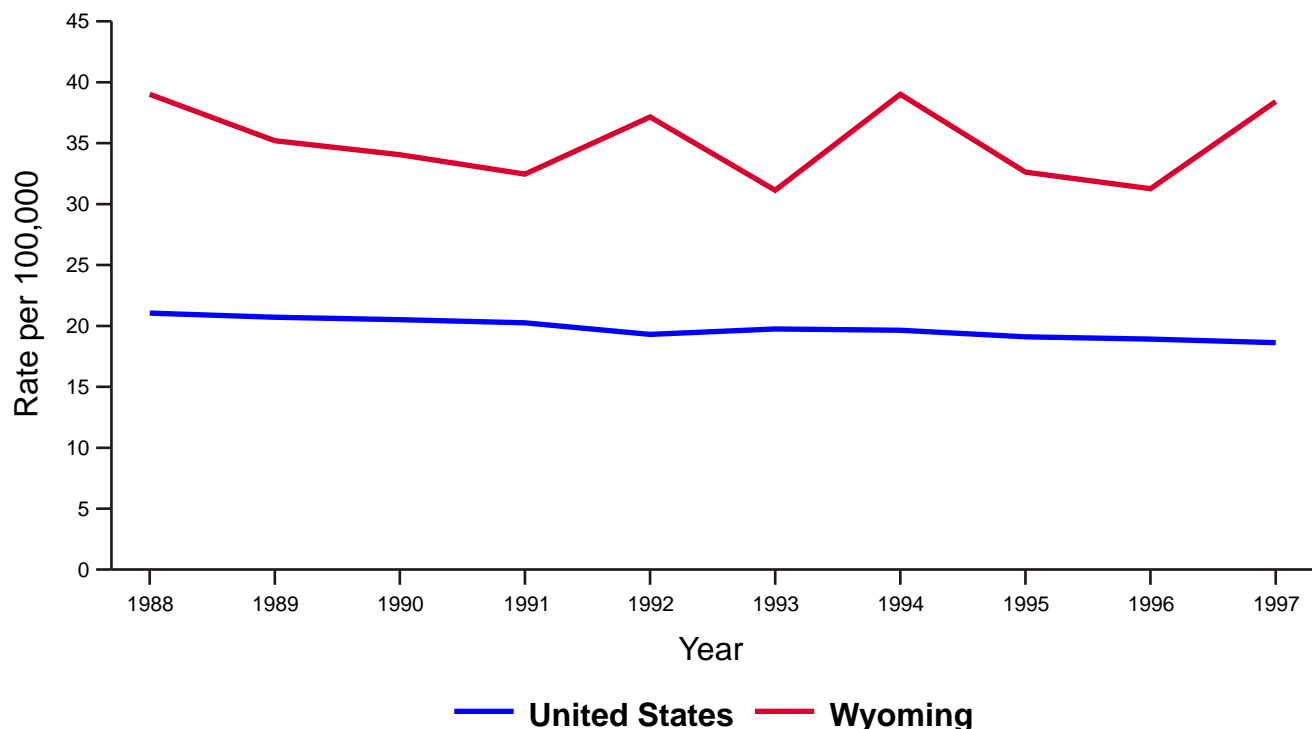

United States and Wyoming 1988-1997

Traumatic Brain Injury-Related Death Rates* United States, 1995-1997

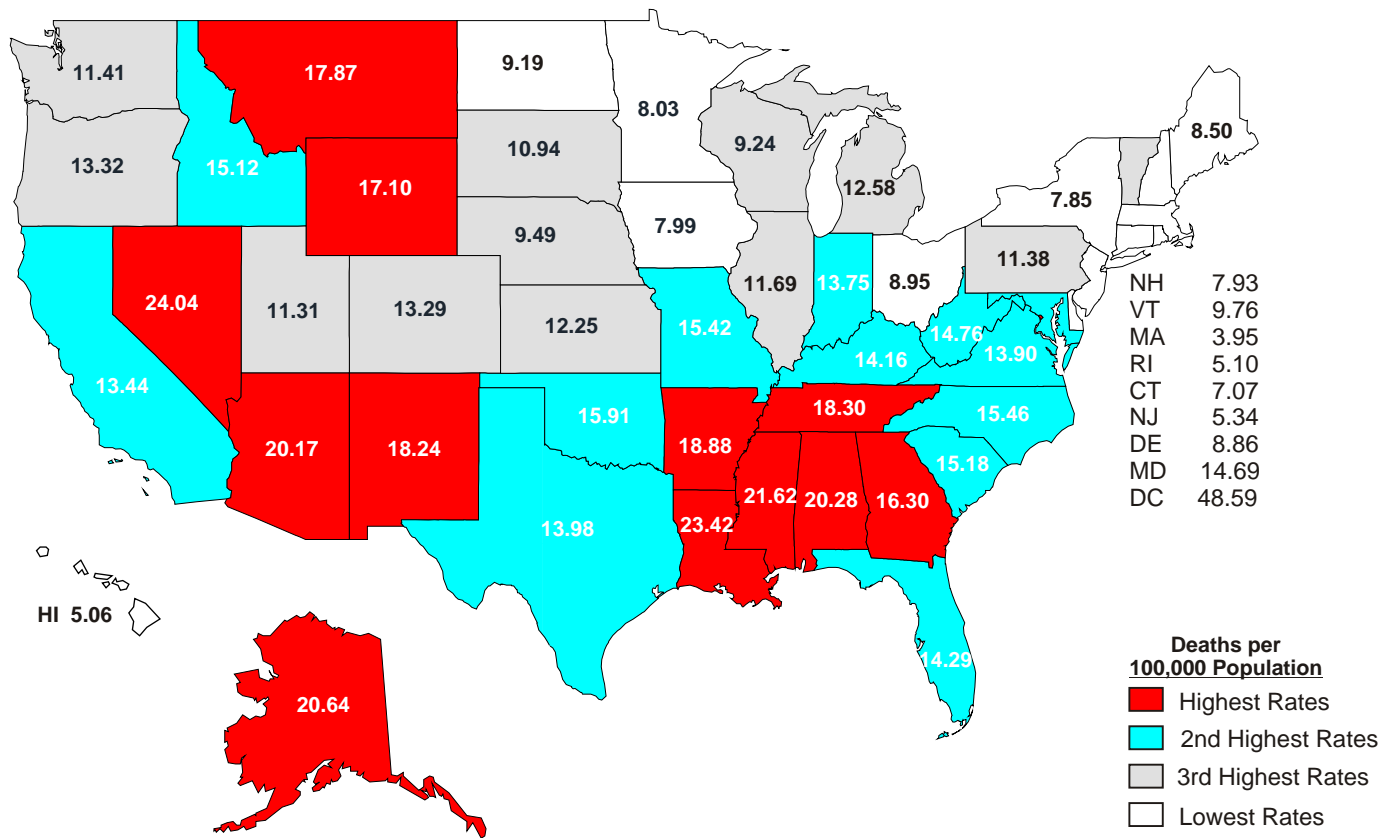

United States and Wyoming 1988-1997

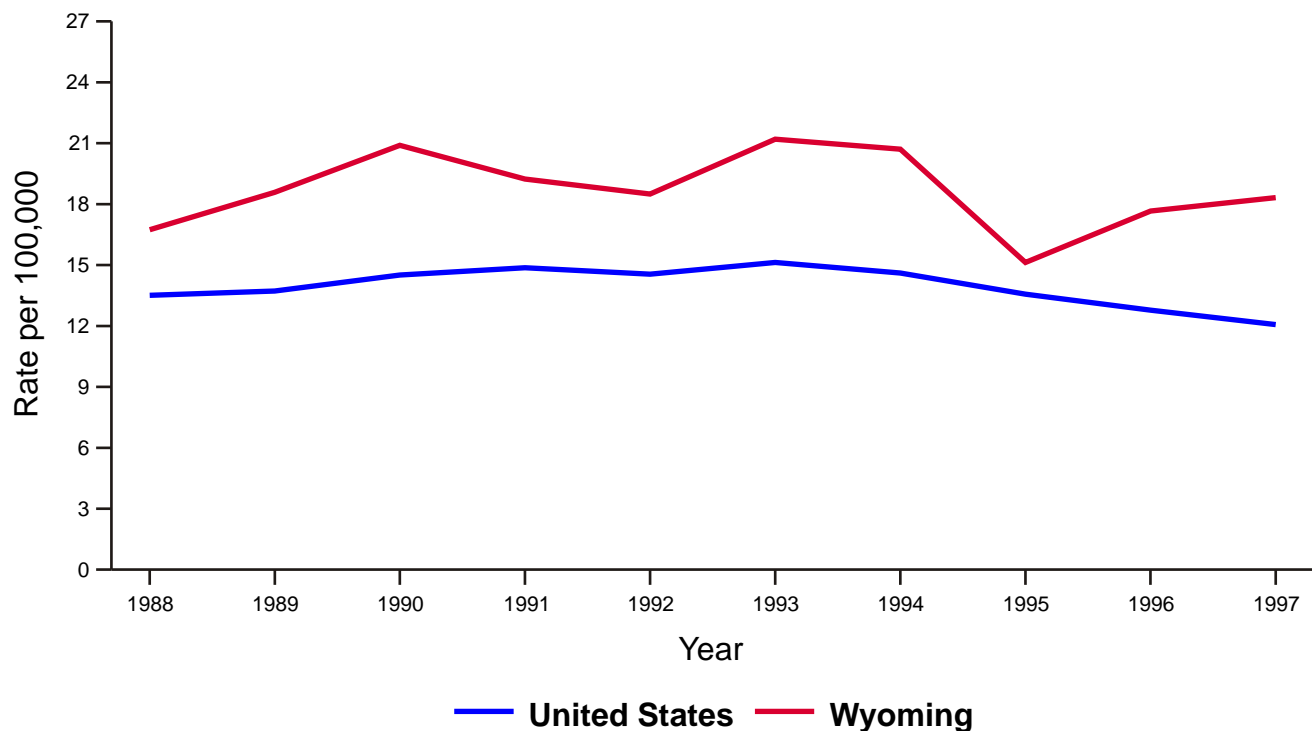

* Includes unintentional and intentional deaths from motor vehicles, firearms, falls, and other causes (of determined and undetermined intent).

Firearm-Related Death Rates* United States, 1995-1997

United States and Wyoming 1988-1997

* Includes deaths from firearm suicide, firearm homicide, unintentional firearm-related deaths, and firearm-related deaths of undetermined intent.

WYOMING INJURY CONTROL PROJECTS

Cooperative Agreements

At present, there are no cooperative agreements in Connecticut funded by the National Center for Injury Prevention and Control (NCIPC).

Research Grants

At present, there are no extramural research projects in Connecticut funded by the NCIPC.
